

Technology Solutions

IFG Technology Solutions is partnered with industry-leading manufacturers to help clients procure known and trusted technology solutions and products. We work closely with our clients and partners to determine solution needs and provide implementation, integration, and support services for those technology solutions.

Our Key Technology Solutions

Software Licensing

IFG holds Software Licensing Program (SLP) contracts with CA Technologies and SAS in the State of California. SLP contracts simplify the process for procuring proprietary software licenses and software upgrades and allow departments to take advantage of pre-negotiated volume discounts offered to the State by software publishers. IFG can assist you in determining your licensing needs and prepare quotes for budgetary and purchasing purposes.

Application Security Services

IFG specializes in Application Security Services. Businesses can often deploy application security software in lieu of developing security practices and processes, leaving gaps in the efficacy of the department's security program. IFG provides a broad range of Application Security products and services to help maturation of their protection efforts. Application Security goes hand in hand with other aspects of an organization's security services such as network security, data security, and other cybersecurity services to help companies protect, detect, and respond in the event of an incident. IFG assists organizations to design, build, run, maintain, and monitor their applications.

Our Technology Partners

Our Services Include:

- Secure Application Development
- Identity and Access Management
- API Security
- API Management
- Data Security
- Application Performance Monitoring

Government Analytics

Through data management, business intelligence, and analytics solutions, IFG helps government agencies enhance program performance, reduce costs, increase transparency, and improve quality of life for citizens.

Government Analytics is also a helpful information source for citizens who want to better understand the complexities and challenges of state and local government and the roles analytics can play. Through innovative software and services, IFG helps customers to transform data into intelligence. We help our clients determine requirements and select the right technology solutions to meet their technology and business objectives.

Contracting Options

IFG is licensed to do business in many states and holds multiple contracts in the public sector making it easier for our clients to do business with us. We are also a State of California certified small business and a Disadvantaged Business Enterprise certified through the California Department of Transportation.
